Acknowledgements

First and foremost, I would like to thank Professor Meg Kirkpatrick for advising me and overseeing this project. Your words of wisdom, patience, and guidance gave me the confidence and tools necessary to carryout this experiment and thesis. And most importantly thank you for your friendship and mentoring. Words cannot express how much you taught me, and how grateful I am for all that you have done for me.

Professor Baron and Professor Kalberg: thank you for serving on my thesis committee and providing me with encouragement, and support throughout this process and my time at Wheaton.

I dedicate this work to the lab crew: Liana Merrill, Jasmine Bhatia, and Phil Manos. Thank you for your help, friendship, and humor throughout this project. I never would have been able to do it with out you guys. The thoughtful team work that took place while working on this project demonstrates that collaboration and peer support is crucial in successful academic work.

Table of Contents

Abstract-----	1
Introduction-----	2
Why Use Mice Models-----	2
Why Study Rodent Sex Behavior-----	3
Steroid Hormones: Estradiol and Progesterone-----	5
The Interaction of Steroid Hormones and their Receptors-----	6
Mapping Estradiol and Progesterone Rich Brain Areas-----	7
Sensory Input and Female Rat Sex Behavior-----	9
Different Types of Stimuli-----	10
Mating Stimuli and Induction of Fos-IR-----	12
Differences among Rodent Species-----	14
Methods-----	16
Results-----	20
Table 1-----	20
Figure 1-----	21
Figure 2-----	22
Figure 3-----	23
